

VirtuIT Systems specializes in the cost-effective management, maintenance and protection of your company's critical networks and infrastructure.

VirtuIT's approach is customer-centric and completely adaptable to your individual needs – a model that enables us to seamlessly augment your internal staff or serve as your onsite IT Department.

In all cases, our goal is to help you focus on running your business as we handle the daily operation of your computer networks and infrastructure.

Not all businesses are the same. Our core services offerings are broken into separate lines of business that offer flexibility based on your organizational needs.

DESKTOP MANAGED SERVICES

Ensure your desktops are managed, frequently patched, and most importantly, secured. All desktop management tools are provided to ensure they're easily provisioned and optimally performing.

ENTERPRISE MANAGED SERVICES

Fully outsource or supplement your current IT staff to support all aspects of your networks and infrastructure. Including but not limited to: Storage, Servers, Networking, Virtualization, Cloud Architectures, & Security.

HOSTED MANAGED SERVICES

If you're looking to eliminate the need to manage the complex scope of an IT infrastructure, a hosting option enables a 'just works' model. We'll help you determine your current utilization and build a fully hosted architecture for your organization.

PROJECT BASED SERVICES

For those organizations with an internal staff that can handle the day-to-day tasks, a per-project-model enables you to leverage outsourced expertise as needed. A project plan is created based on your technical gap, and an execution plan is put in place.

BLOCK OF HOURS

If you know you're going to need some IT assistance but not sure when and where yet, a block of hours enables you to leverage technicians on pre-purchased hours to help with projects of your choosing.
